

Alltech[®] MYCOTOXIN MANAGEMENT

Guideline limits for mycotoxins in animal feeds to reduce negative effects on health and performance

The Alltech Mycotoxin Management program uses the same guideline limits for all feedstuffs and finished feeds, however, guideline limits are specific to each individual animal species by age group and physiological status measured in parts per billion (ppb). The Alltech 37+[®] mycotoxin analysis guideline limits were designed by utilizing two areas of information, government regulations and scientific research. Mycotoxin advisory levels provided by global government regulations are considered but oftentimes these suggested limits are set quite high and represent a level that could severely harm the animal. As a result, these governmental guidelines are used as a reference for Alltech 37+ but may not be identical. Available scientific research is also utilized to establish guideline limits for each mycotoxins and animal species. With current research, the Alltech 37+ guideline limits can be set at lower, medium or higher levels to understand the impact of mycotoxins on animal performance. As specific Mycotoxin limits may apply in individual countries, please also refer to the regulatory limits in your local area.
